

## New case line "DiVar"

Intermas started new general case line suitable for mounting non-standard (not 19 inch) components.

Benefits like reasonably price and variable design of all dimensions will predestine this modular case especially for custom specific requirements and applications. For

optional EMC shielding the proven stainless steel contact strips from Interimas can be used or be upgraded later on. Several kind of sheet material can be used for panelling: aluminium, steel, stainless steel or plastic with thickness of 1.5 mm to 2.5 mm. The panels will be stacked into the aluminium die cast corner profiles and can be screwed in addition if necessary. While deciding of

several materials surfaces and different colour painting a wide range of design aspects are possible.

Three base types of case variants can be delivered out of stock: 19 inch chassis, control desk panel and a small desk top version

A wide range of additional accessories will facilitate integration of 19 inch parts or other components or electronic boards.

Threaded inserts can be shoved into special slots within the corner profiles and will allow direct mounting of PCB's or chassis plates.

Different DiVar cases can be equipped with several kinds of handles.  
A mounting kit for DIN C rail technology is also available.
