

## Intermas case line *DiVar* for control panels

Regardless of usage as control panel within indoor arenas, conference rooms, stage control, signalling or light regulator, base station or mobile control panel. DiVar case from Intermas fits always to any requirements or different applications.

As bases Aluminium die cast corner profiles allow variation of every dimension as desired.

While deciding of several materials surfaces and different colour painting a wide range of design aspects are possible.

Intermas will also deliver appropriate custom specific foils. As a special benefit of the case DiVar all borders of the foil will be covered by corner

profiles and panel slots. Therefore damaging or peel off of the foil at the border line will be impossible.

However, beyond construction principle with corner profiles and flat panels guarantees cheap and easy treatment for drilling or milling. Easy mounting of chassis plates or additional components is possible by threaded inserts shoved into special slots within the corner profiles.
