

Flexibility has a name now: **InterShell** and **InterBox**

With the housing series **InterShell** and **InterBox**, Intermas breaks new ground towards variable dimensions and individual customer requirements. Both housings stand out due to their EMC compliancy and a protection type up to IP 40. Since both products have a simple design, they can be easily and quickly assembled. With these housings, Intermas offers many uncomplicated solutions for small form factors.

The aluminum housing **InterShell** is composed of a top- and a subshell, two front panels and four screws. The possibilities of color are unlimited. Also a customer-specific print is possible. The housings can be used for the packaging

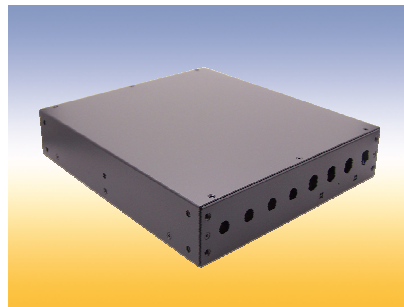

of small electronic units such as Eurocard formats with 100x160 mm, as universal- or as mITX housings. InterShell is available in the following standard dimensions (h/w/d). It can, however, also be tailored to your special needs:

- 40x106,6x168,6 [mm]
- 60x150x120 [mm]
- 50x190x190 [mm]

The universal housing **InterBox** is equally variable in its use: From a compact cabinet housing up to a 19" slide-in housing. Made of zinc-coated sheet steel, it consists of a floor tray, a lid and four screws. Color and printing can also be designed individually by the customer. **InterBox** can be delivered either as desktop housing - with two different pedestal kits to choose - or as assembly housing with flange angle or top-hat rail. This housing can also be provided in the standard dimensions indicated below or tailored to the special needs of the customer. The standard sizes (h/w/d) are:

- 59x200x205 [mm],
- 1HP x200x205 [mm],
- 1HP x300x300 [mm].
